Customer Problem Statement

I am	Describe the customer and their attributes here
I'm trying to	List the thing they are trying to achieve here
but	Describe the problems or barriers that get in the way here
because	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions the result from experiencing the problems or barriers

Example:

PS-1

Problem Statement (PS)	I am	I'm trying to	But	Because	Which makes me feel
PS-1	An employee requesting a standard laptop	Request a laptop through the organization's IT procurement process	The request process involves multiple manual steps and approvals	Laptop requests need to be manually checked, approved, assigned, and tracked	Frustrated and uncertain about the status of my request

Problem Statement (PS-1)

I am an employee who needs a standard laptop for my work.

I'm trying to submit a laptop request and receive the required device through the organization's IT procurement process.

But the laptop request process involves multiple steps such as submitting the request, obtaining approval, creating procurement tasks, and tracking the request status.

Because these activities may require manual intervention from IT and procurement teams, the process can become time-consuming and may lead to delays or errors.

Which makes me feel frustrated and uncertain about when my laptop request will be processed and completed.

PS-2

Problem Statement (PS)	**I am**	**I'm trying to**	**But**	**Because**	**Which makes me feel**
PS-2	An IT procurement/Hardware team member	Process standard laptop requests efficiently	I have to manually create and assign tasks for each request	The existing process does not automatically create and route procurement tasks	Overloaded and concerned about delays and errors

Problem Statement (PS-2)

I am an IT procurement or hardware team member responsible for processing laptop requests.

I'm trying to process standard laptop requests quickly and accurately.

But I may need to manually create, assign, and track tasks for each laptop request.

Because the procurement process is not fully automated, repetitive manual activities can increase workload and the possibility of errors.

Which makes me feel overloaded and concerned about processing delays and inconsistent task handling.
