Project Design Phase

Proposed Solution Template

Date	3 October 2026
Team ID	SWTID-2026-2050
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The standard laptop procurement process can involve manual request handling, approval, task creation, and assignment. This may lead to delays, inconsistent processing, and additional workload for IT teams. The project aims to automate the standard laptop ordering process using ServiceNow Flow Designer.
2.	Idea / Solution description	Create a ServiceNow Service Catalog item named “Standard Laptop” and connect it to a Flow Designer flow named “Standard Laptop Task”. When a user submits the request, the Service Catalog trigger starts the flow and the “Create Catalog Task” action automatically creates a task using the Requested Item record. The flow sets the short description and description to “Laptop need to Configured”, assigns the task to the “Hardware” group, and sets Approval to “Approved”.
3.	Novelty / Uniqueness	The solution standardizes and automates the repetitive steps involved in standard laptop procurement. Automatic catalog-task creation, assignment, and field population reduce manual intervention and provide a consistent workflow from request submission to fulfillment.
4.	Social Impact / Customer Satisfaction	Employees can submit a Standard Laptop request through the Service Catalog and have the request processed through a consistent workflow. Automation reduces manual effort, improves request visibility and tracking, minimizes avoidable errors, and helps the IT team respond more efficiently.
5.	Business Model (Revenue Model)	The solution is an IT service automation capability for organizations using ServiceNow. Its primary business value is cost and effort reduction through automation of repetitive procurement activities. It can also be extended as a configurable workflow solution for other IT procurement and asset requests.

6.	Scalability of the Solution	The workflow can be extended to other IT assets such as desktops, monitors, keyboards, software, and accessories. Additional approval rules, assignment groups, notifications, catalog items, and procurement conditions can be added in Flow Designer, allowing the solution to scale across departments and organization-wide IT procurement processes.
