Project Overview

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Description:
This project automates the procurement process for standard laptop requests in ServiceNow using **Flow Designer**. When a user submits a Standard Laptop request through the Service Catalog, the configured flow is triggered automatically. It creates a Catalog Task, assigns it to the **Hardware** assignment group, sets the required description and approval values, and allows the request to be tracked through the Requested Item and Catalog Task records.

Project Version: 1.0

Testing Period: 01-10-2026 to 03-10-2026 **Testing**

Scope

Features and Functionalities to be Tested 1.

Standard Laptop Service Catalog item.

2. Standard Laptop request submission.
3. Service Catalog trigger.
4. Flow Designer execution.
5. Create Catalog Task action.
6. Requested Item mapping.
7. Catalog Task creation.
8. Short Description validation.
9. Description validation.
10. Assignment Group validation.
11. Approval field validation.
12. Requested Item record verification.
13. Catalog Task status verification.
14. End-to-end procurement workflow.

User Stories / Requirements to be Tested

- As an employee, I should be able to request a Standard Laptop through the Service Catalog.
- When a Standard Laptop is requested, the Flow Designer flow should trigger automatically.
- The flow should create a Catalog Task automatically.
- The Catalog Task should be assigned to the **Hardware** group.
- The Catalog Task should contain the required description.
- The approval value should be updated as configured.
- The user should be able to view the created Request, Requested Item, and Catalog Task.

Testing Environment

Field	**Details**
Platform	ServiceNow Developer Instance
Application	Global
Module	Service Catalog / Flow Designer
Flow Name	Standard Laptop Task
Catalog Item	Standard Laptop
Browser	Google Chrome
URL/Location	ServiceNow Developer Instance
Credentials	Tester ServiceNow account

Test Cases

Test Case ID	**Test Scenario**	**Test Steps**	**Expected Result**	**Actual Result**	**Pass/Fail**
TC-001	Open Standard Laptop Catalog Item	1. Open ServiceNow. 2. Click **All**. 3. Open **Service Catalog → Hardware**. 4. Select **Standard Laptop**.	Standard Laptop catalog item should open successfully.	Standard Laptop catalog item opened successfully.	**Pass**
TC-002	Submit Standard Laptop Request	1. Open Standard Laptop. 2. Click **Order Now**. 3. Submit the request.	A new request should be created with a Request Number.	Request was created successfully.	**Pass**
TC-003	Service Catalog Trigger	1. Submit Standard Laptop request. 2. Check Flow Designer execution.	Service Catalog trigger should start the **Standard Laptop Task** flow.	Flow was triggered successfully.	**Pass**

TC-004	Flow Execution	1. Open Flow Designer. 2. Check the Standard Laptop Task flow execution.	Flow should execute without errors.	Flow executed successfully without errors.	**Pass**

TC-005	Create Catalog Task	1. Submit laptop request. 2. Open the Requested Item. 3. Check Catalog Tasks.	A Catalog Task should be created automatically.	Catalog Task was created successfully.	**Pass**
TC-006	Requested Item Mapping	1. Open Flow Designer. 2. Open Create Catalog Task action. 3. Verify Request Item mapping.	Requested Item Record should be mapped to Request Item.	Requested Item was mapped correctly.	**Pass**
TC-007	Short Description	Open the generated Catalog Task and check Short Description.	Short Description should be **"Laptop need to Configured"**.	Correct short description was displayed.	**Pass**
TC-008	Description Field	Open the generated Catalog Task and check Description.	Description should be **"Laptop need to Configured"**.	Correct description was displayed.	**Pass**
TC-009	Assignment Group	Open the Catalog Task and check Assignment Group.	Assignment Group should be **Hardware**.	Hardware group was assigned.	**Pass**
TC-010	Approval Validation	Open the Catalog Task and check Approval.	Approval should be set to **Approved** as configured.	Approval was displayed as Approved.	**Pass**
TC-011	Requested Item Verification	Open the Request Number and then the Requested Item record.	Requested Item should contain the submitted laptop request.	Requested Item was displayed correctly.	**Pass**
TC-012	Catalog Task Verification	Scroll to Catalog Tasks in the Requested Item.	Created Catalog Task should be displayed with correct details.	Catalog Task was displayed correctly.	**Pass**
TC-013	End-to-End Workflow	Submit Standard Laptop request and verify the complete process from Request → Requested Item → Catalog Task.	Complete workflow should execute successfully.	Complete workflow executed successfully.	**Pass**

TC-014	Invalid/Incomplete Request	Submit the request with any required information missing, if applicable.	System should prevent or handle incomplete submission according to configuration.	Request was handled according to configuration.	**Pass/Verify**
TC-015	Multiple Requests	Submit more than one Standard Laptop request and check the generated tasks.	Each request should create its corresponding Catalog Task.	Each request was processed separately.	**Pass/Verify**

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	No bugs identified during UAT.	Not Applicable	Low	Closed	All tested workflow functions operated as expected.

If you actually found a bug

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Catalog Task was not created after submitting Standard Laptop request.	1. Open Standard Laptop. 2. Click Order Now. 3. Submit request. 4. Check Requested Item → Catalog Tasks.	High	Open	Flow trigger and execution should be checked.

Sign-off

UAT Final Notes

- All major functions of the **Standard Laptop procurement workflow** should be tested.
- The Service Catalog request should trigger the configured Flow Designer flow.
- The flow should automatically create the Catalog Task.
- The Catalog Task should contain the configured **Short Description, Description, Assignment Group, and Approval** values.
- Both positive and negative scenarios should be tested.
- Any bugs identified during testing should be documented in the Bug Tracking section.
- The UAT document should be signed by the tester after completing the actual testing.
